AFDI-5V

AFDI-5V 12 VOLT TO 5 VOLT CONVERTOR

When replacing radios in vehicles with OEM amplifiers, mainly in Ford, Lincoln, aMercury vehicles, an audible "pop" through the speakers may be heard, especially the subwoofer. The main reason for this "pop" is that the OEM amplifiers do not require 12 volts to turn on but 5 volts.

Axxess has developed the AFDI-5V to take a normal 12 volt turn on from the aftermarket radio and drop it down to 5 volts, which the OEM amplifier handles better. A 3 wire hook up makes the **AFDI-5V** very simple to use.
